php logic :

```php
<html  >
<head>
   <title > Pizza Corner </title  >
</head>
<body>
   <div style=" color: green; text-align:justify; font-size:25px ">
<p > If we have a rectangle  of length 7 and width 5 what would possibly be it's area ? : </p>
<?php
// get the premiter of a rectangle :

function getRectanglePremiter($length , $width ){
$prim = $length*2 + $width*2;
return $prim;
}
echo getRectanglePremiter(7,5);
?>
<br>
<p> What is the  absolute of -10  ?</p>
<?php
//  implement an absolute function
function absolute( $num){

if($num<0){
    $num=$num-($num*2);
}
return $num;
}
echo absolute(10);
?>
<p>  What is the  volume of the pizza of height 10 and radius 5 is ? </p>
<?php
// then get volume of a pizza
function pizzaVolume ($height , $radius ){
$pie=pi();
$vol=$height*($radius**2)*$pie;
return ceil($vol);
}
echo pizzaVolume (10 , 5 );
?>
</div >
</body >
</html >
```
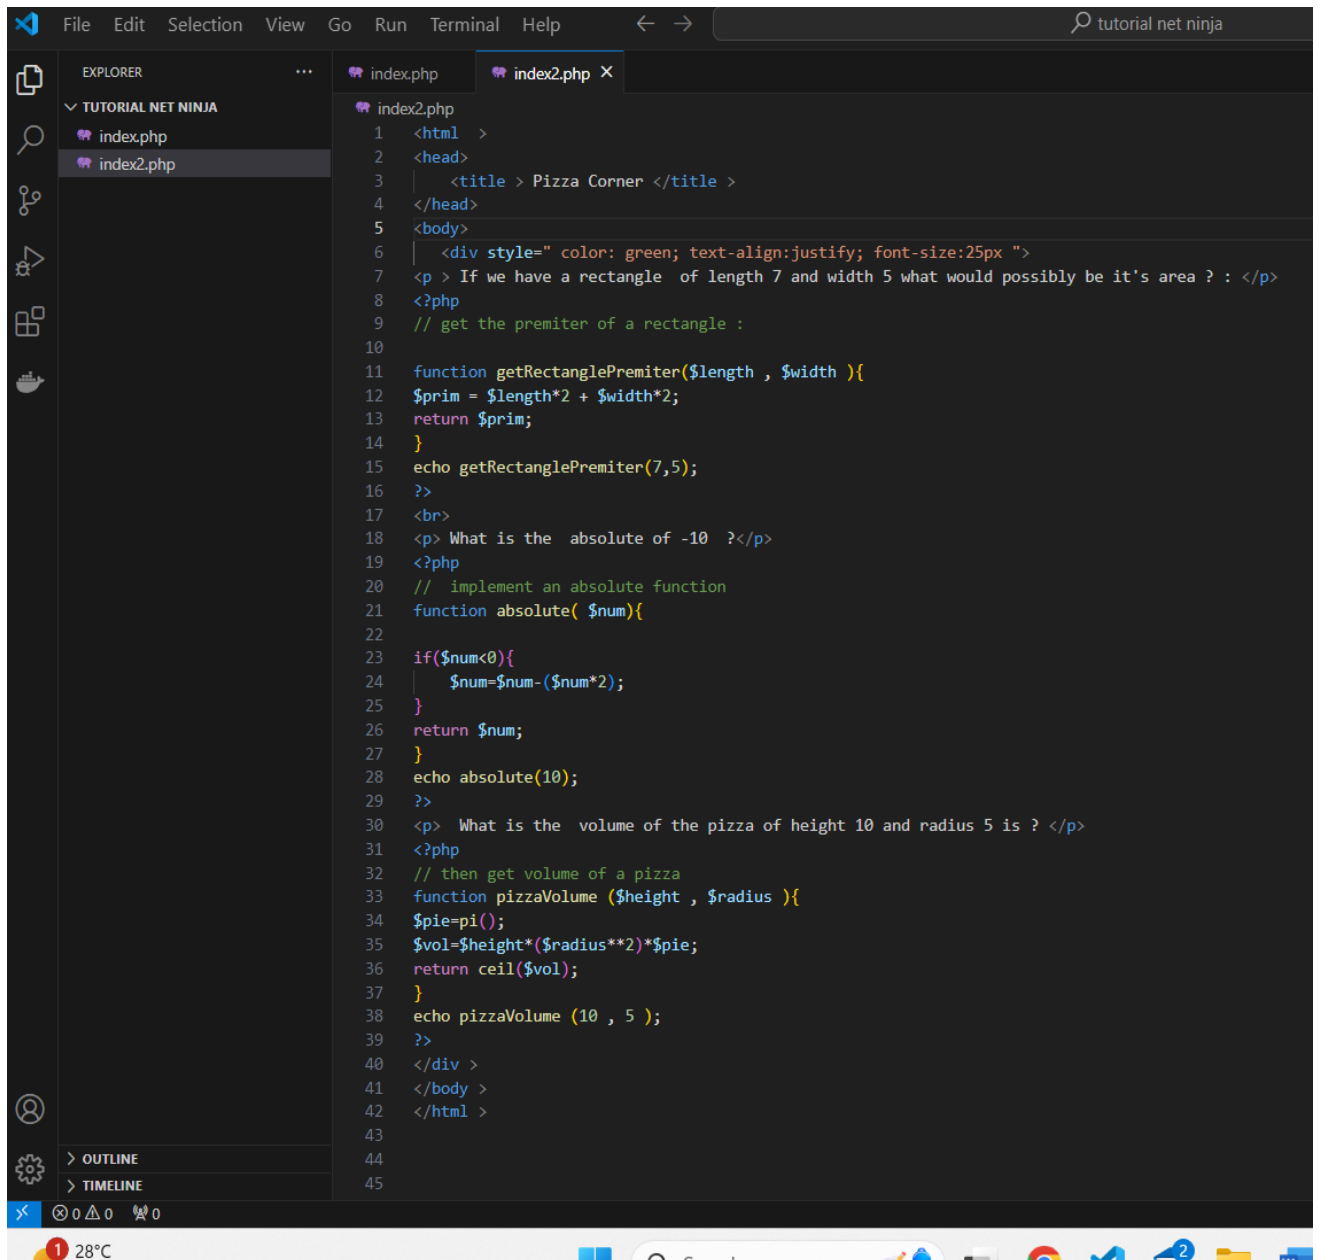

Output :

If we have a rectangle of length 7 and width 5 what would possibly be it's area ? :

24

What is the absolute of -10 ?

10

What is the volume of the pizza of height 10 and radius 5 is ?

786
